

Parts for all makes and models

It doesn't matter who made your crane

We can provide the parts you need when you need them

The right parts at the right time

When it comes to parts and service, it doesn't matter who made your crane. We offer genuine Konecranes spare parts as well as replacement parts for all other makes and models.

With almost a century of experience working on cranes and hoists of all types and makes, we have become a leading overhead crane maintenance supplier. Our service teams are trained to understand the unique requirements of each brand and provide professional service in accordance with manufacturers' recommendations and industry best practices.

Genuine Konecranes parts

Contact us for genuine Konecranes spare parts. We are also the OEM for replacement parts and service for dozens of brands that have come into the Konecranes family through strategic acquisition.

Performance parts

Performance Parts are engineered for a more demanding environment than was intended for the original part. They offer improved durability on cranes in critical process applications.

Parts for any brand

We are fluent in all brands, not just our own. Konecranes can usually source original equipment manufacturer parts.

Equivalent parts

As an alternative to OEM parts, Equivalent Parts are functionally similar replacements manufactured by Konecranes or sourced from suppliers other than the original manufacturer. They are competitively priced and backed by a Konecranes warranty.

Parts design and manufacturing capabilities

Our cross-functional and highly-skilled machinists at our parts manufacturing facilities in the United States and Finland manufacture parts for all brands of cranes. We take pride in maintaining and implementing extensive quality control measures, helping us provide the reliable, high-quality parts our customers expect.

Rebuilding

A new part is not always the best answer. Urgent repairs can sometimes be accomplished by rebuilding or refurbishing in less time than it would take to order a new part or component, especially with long lead time items. Stocking rebuilt motors, gear cases and brakes for spares or backup is an option that can reduce inventory costs.

Component and assembly modernization

In addition to offering new components and assemblies, Konecranes specializes in engineering and modernization of components and assemblies to replace those that are obsolete or no longer meeting manufacturing and industry standards. When your needs include replacement of hoists, trolleys, controls or the addition of current technologies, a crane modernization may be a viable option to extend your original investment.

Reverse engineering

Replacement parts can be manufactured through reverse engineering for any make and model of overhead crane. Reverse engineering can help solve the problem when crane parts are obsolete or the OEM is no longer in business. It allows for enhancements to the material, design or manufacturing process to improve performance and increase the lifespan of the part.

Made-to-order parts

We can make parts to your specification. Manufactured parts can include hooks, rope drums, gears and shafts. Available in select markets only. Contact us for details.

Johannessen Trading Company, California, USA

Expert knowledge and fast, efficient repair saves the day

Crane supplier unable to identify part – suggests purchasing a new crane.

Johannessen Trading Company in Commerce, Calif. distributes steel and construction products. Cranes are used to load steel for deliveries and to stock steel in the facility.

When a hoist load brake needed to be repaired, another crane company suggested a new hoist and trolley to the customer. The crane company was unable to identify any of the crane components believing the parts for the hoist were now obsolete. Johannessen Trading needed an immediate solution. Switching the hoist and trolley system would require a long lead time resulting in several weeks of downtime.

Konecranes quickly identifies and replaces the part

Johannessen Trading asked Konecranes to look at the crane to see if we could identify the correct part that they needed. Though a serial number could not be found on the crane, Konecranes knew the make and model from previous experience with that type of crane. Using that information, our spare parts team was able to identify the correct part numbers and provide pricing information.

Konecranes was then able to propose a repair for the hoist load brake. The customer was impressed by how quickly the part was identified but were even more impressed that Konecranes could have the crane up and running in such a short time.

Repair helps save more than US\$20,000

The load brake was installed without issue and the crane was tested and put back into production. The repair helped save Johannessen Trading Company more than US\$20,000 because they didn't have to purchase a new hoist and trolley system and they avoided several weeks of unnecessary downtime.

Parts expertise based on service and maintenance experience

Drawing on our experience with hundreds of thousands of assets under service agreement, we can guide you in selecting spare parts inventory. We keep tens of thousands of parts in stock across distribution centers around the world.

Parts and service go hand-in-hand

Having the right parts on hand, whether your crane is new or old, can help reduce downtime during maintenance or repairs. And not only can we provide you with parts, but also a range of services from on-call breakdown assistance and inspections to maintenance programs and complete operation outsourcing. Our expert service technicians can install any part on any crane, whether a planned repair or an emergency.

Spare parts online, any time

Konecranes STORE features spare parts and accessories for many brands, makes and models of cranes and hoists; and selected pre-configured lifting equipment.
