

How do crickets detect danger?

They have evolved small hairs that can detect the air current of a nearby frog opening its mouth.

Safety. Evolved.

Safety-Assist Retrofits

Crane adaptations that detect danger and enable safer operations.

Gantry Collision Prevention

Assists in avoiding crane-to-crane and crane-to-obstacle collisions.

Adapt and thrive

Konecranes is the premier port services provider to brownfield terminal developments. Our range of retrofit products will enable your fleet to adapt to a fast-changing environment. Welcome to your evolution.

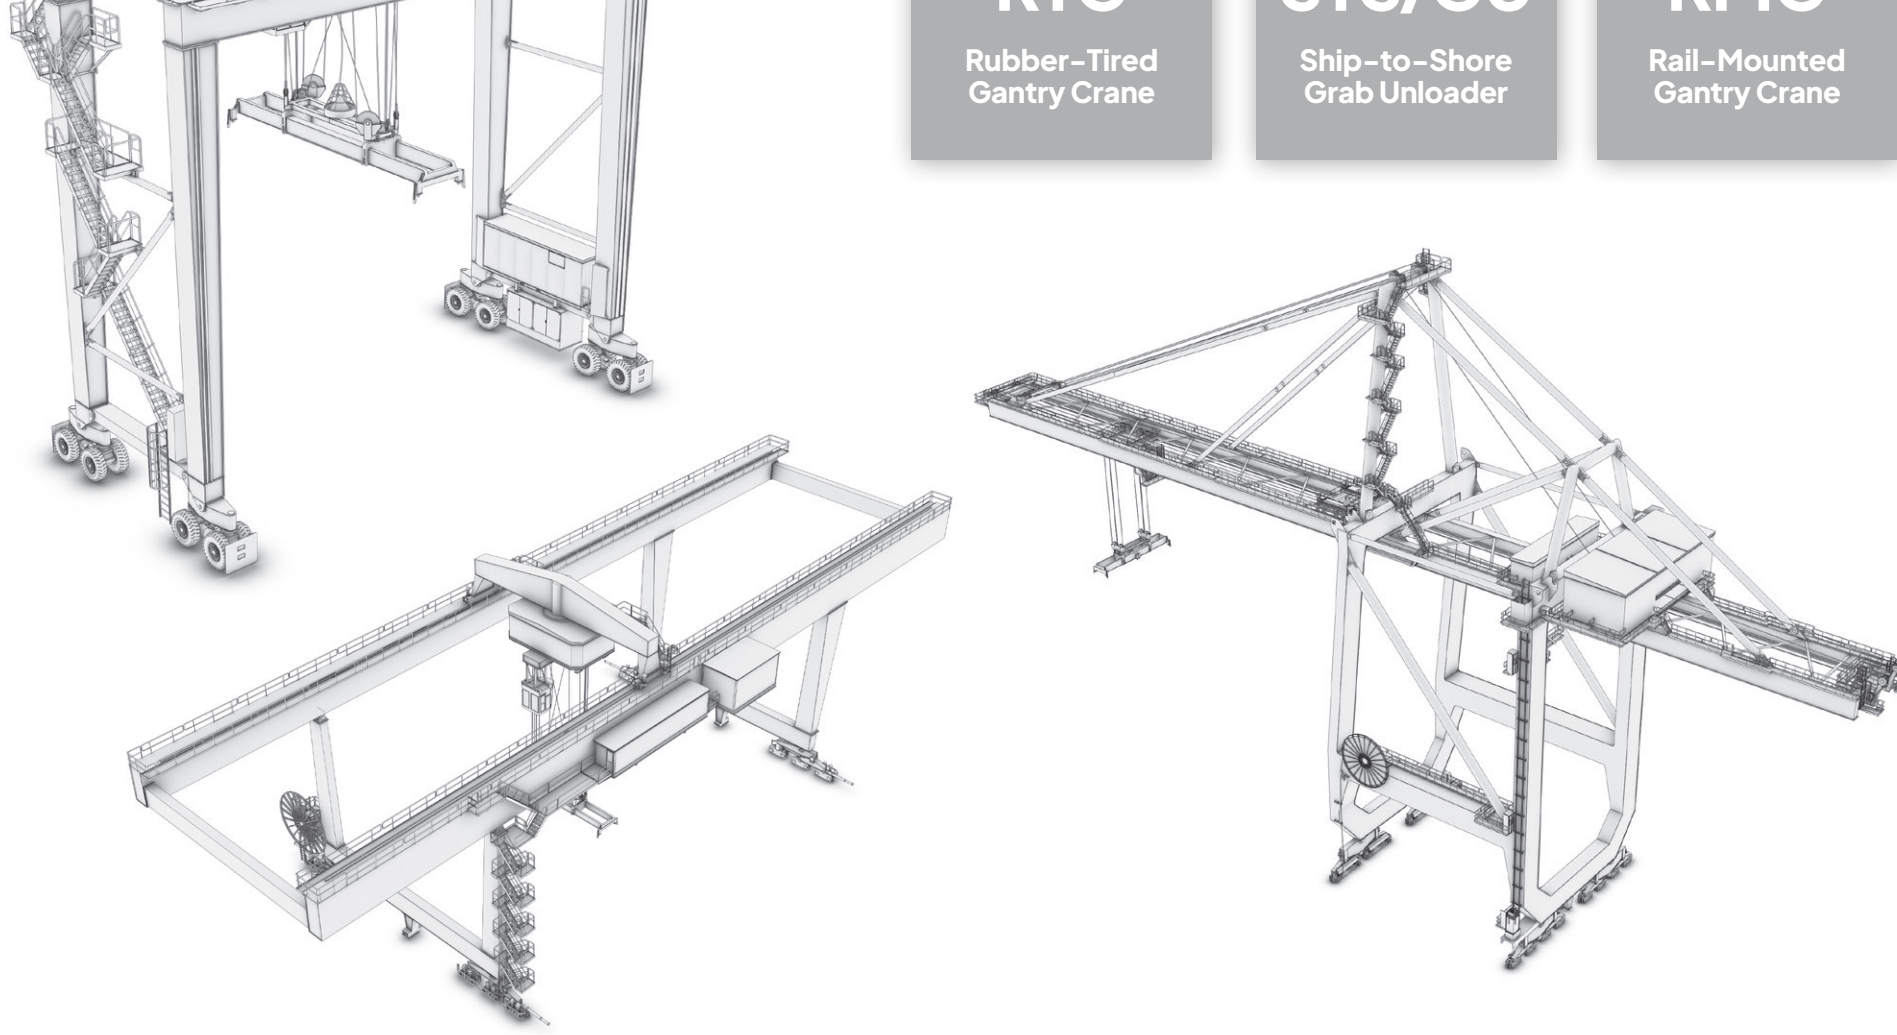

Benefits

- Laser sensors in the system perform slowdown and stop-limits within a 20-meter range
- The system works in every mode of gantry travel: normal, cross and rotate
- Longer range and better weather tolerance compared to ultra-sonic sensors
- Simplest and most accurate solution in the market
- Highly resistant to adverse weather.

AB
Any Brand

This technology can be applied to the following Konecranes equipment and any other crane brand. Installation of laser sensor and PLC connection may vary when implementing system to other RTG brands.

How it works

- A laser sensor is installed on each RTG bogie
- Safety zones are pre-programmed to comply with local regulations and your own yard requirements
- If a laser sensor detects something inside the safety zone, the crane stops moving
- Operators are informed of the system status at all times.

What you need to know

- Gantry collision prevention is mandatory with further automation
- Turn-key project delivery with all required hardware and software plus training
- Site works and commissioning: 2 days per crane
- Customer needs to ensure prompt availability of cranes to ensure the above timelines
- Customer needs to provide safe location where installation and commissioning can be completed.
